## **This is to clarify what is meant by "with consultation"**

Outpatient: if the privilege is granted "with consultation," it means that the Midwife needs to discuss each patient with a provider who has unrestricted privileges in the area of consultation. It is at the discretion of that provider to determine what the level of detail this discussion needs to be.

Inpatient Rounding: : if the privilege is granted "with consultation," it means that the Midwife needs to discuss the patient's care with an attending staff physician. It is at the attending staff physician's discretion to determine what the level of detail this discussion needs to be.

Procedures: if the privilege is granted "with consultation," it means that the procedure needs to be discussed with a provider who has that particular unrestricted privilege(s) prior to performing the procedure. A procedure log may be kept by the Midwife to document the procedures performed.
