Hello Julie,

Just saw this tweet from your office. Like everything else the Health Department has done to avoid facts and context, sadly your office avoid answering this persons question. Question had nothing to do with some random answer given (which your answer, by the way makes no sense as it contradicts itself). Question was why close to 70% have died in SNF? Can't say I'm surprised by this though. Truly unfortunate.

**Contra Costa Health Services**

[@RaRa2010](#) [@CCCounty](#) LTCFs were one of the first to quarantine. That means infections in these high-risk settings are coming in from the community. There is less risk of community spread when dining outside than if restaurants serve indoors. But, wearing masks even when seated outside reduces risk.
