Charging Station Information
In this section, you are required to add the charging station quantity, type (Level 1, Level 2 [low], Level 2 [high], and DC Fast), make, and model that will be installed at this facility. Click the plus (+) button on the right to add a Charging Station type.
Charging Station Type \oplus
Are all of the proposed chargers at this facility accessible to the public?
How many days per week will the charging station(s) at this facility be available for use?
How many hours per day will the charging station(s) at this facility be available for use?
Additional Comments or Clarification

Add a Charging Station Type

Charger Type

An active connector is defined as the plug that connects a charging station to an electric vehicle and provides power to charge its battery. The number of active connectors on a site is equivalent to the maximum number of vehicles that can be charging simultaneously.

Please keep in mind that charging stations that have multiple connectors, but can only charge one vehicle at a time is considered to be one active connector. The charger type is the kilowatt output of each active connector and is used to determine the project's eligible funding level.

Active Connector Quantity
